FOR USE: IMMEDIATE

Homeland Security Approves C.E.D.A.P. Funding for SUR-TEC's XOA Series Unmanned Video Surveillance System

LENEXA, Kan. – The U.S. Department of Homeland Security (www.dhs.gov) recently approved the XOA Series unmanned video surveillance system from SUR-TEC, Inc., for CEDAP funding. A leading manufacturer of video surveillance systems for government end-users, SUR-TEC is a member of the Clarence M. Kelley Group of Companies.

Designed for portability and ease of use, XOA is a versatile, portable, multi-use, manned or unmanned video surveillance system. The XOA surveillance system captures real-time evidence from up to four cameras, operating remotely or on site. By saving the images directly to removable media, XOA preserves the chain of custody regarding the original source of the evidence.

“XOA is an extremely valuable video surveillance tool for anti-terrorist investigations. We are very pleased this new system has qualified for direct assistance funding available to emergency responders, investigators, purchasers, and planners,” said Brian Jacobs, SUR-TEC Managing Director.

The CEDAP program is a direct assistance program (not a grant), designed to assist smaller communities in acquiring and using commercially available equipment to prevent, deter, and respond to terrorist attacks, as identified in state homeland security strategies. The Responder Knowledge Base (RKB) (<http://www.rkb.mipt.org>) provides an integrated, online source of approved equipment. RKB is sponsored by The National Memorial Institute for the Prevention of Terrorism (MIPT) (www.mipt.org). “We (SUR-TEC) saw the CEDAP program as a perfect extension of our client service capabilities. The program (CEDAP) provides hardware and operational training at no cost to the end user. With emergency responder needs continually growing and budgets shrinking, DHS is helping agencies secure quality hardware and training via an intensely scrutinized process,” said Jacobs.

Designed for surveillance activities that require portability & flexibility

An extremely versatile, portable, multi-use, manned or unmanned video surveillance system, XOA can be deployed outside the target area in virtually any conditions. It allows the user to manage a variety of cameras (up to four simultaneously), including pan-tilt-zooms, long-range, day-night, analog and IP digital.
